 Product overview
 The BLF series is a line of high-function brushless DC motor units combining a compact, high-torque brushless DC motor and a driver offering digital setting/display capability. The series features a wide range of functions including the digital operator on the driver that lets you set data and operate the motor with ease.

 The Brushless DC Motor control solution generates the 3 phase duty signals (U, V, and W) to the gate driver via 6 channels PWM function. The gate driver controls the MOS to drive motor rotation. Because the system is close-loop controlled, once the load changed, the motor speed will calibrate automatically by target speed and real speed.

Using hall sensor feedback, a constant velocity mode can be selected. The driver is protected against over current (cycle-by-cycle), hall sensor error and under voltage. When an error occurs, a fault light is turned on to notify the user.
