For at least 2,500 years now, one of the most—if not the most—hotly, widely, and often contested issues is the notion of the continuum. It’s a notion which looks upon time, space, locomotion, and change as continuous, which is to say it implies there is no limit to the smallness of the smallest segment of each. Thereby, it necessarily invokes the notion of in-finite divisibility. The latter then demands mathematical conclusions so mani-festly self-contradictory, they boggle the mind no less than does the notion of a square

circle. No wonder, then, they move many a renowned thinker, such as John Locke and David Hume, to proclaim those conclusions “absurd”. See my quotes from them on pages II & VIII.

demonstrates the writing of analytic memos -discusses available analytic software -suggests how best to use The Coding Manual for Qualitative Researchers for particular studies. In total, 32 coding methods are profiled that can be applied to a range of research genres from grounded theory to phenomenology to narrative inquiry. For each approach, Saldaña discusses the method's origins, a description of the method, practical applications, and a clearly illustrated example with analytic follow-up. Dog is a cat- the only problem is that he doesn't behave like one! Instead he wags his tail, sticks out his tongue and yaps in a manner which is distinctly puppyish. Something has to be done! The pride of cats is at stake - the shame of an entire species a consequence of allowing a feline to behave in such a disgraceful canine manner.

*Doing Ethnography in the Wake of the Displacement of Transnational Sex Workers in Yokohama* reflects on the politics, poetics, and ethics of remembering the lives of transnational migrant sex workers in postcolonial Japan. Drawing on ethnographic fieldwork in the port city of Yokohama, the book focuses on the "water trade" in the Koganecho neighbourhood where exploitative and stigmatised labour took place, involving sexual services performed by migrant women. In recent years the city has sought to rebrand Koganecho, evicting transnational migrant sex workers who had been integral to postindustrial development and erasing their past presence. The author explores Yokohama's memoryscapes in the aftermath of displacement through embodied knowledge, engaging her senses and ethics as a colonizer-researcher as she navigates the elusive past through traces that remain in the present. She examines the city's built

environment, official historical narratives, films, and photographic works. With few brothels and workers remaining, Yoshimizu fills the gap with her own interactions, encounters, and imaginings. Yoshimizu also writes through the imagery of water in ways that are informed by the local usage and imaginations—the ocean, flowing rivers, swamps, humidity, alcohol, the fluidity of relationships, and transient lives. The water also offers a way to sense the "ghost", or the displaced lives and the effects of displacement, that, like humid air, stick to those who occupy or inhabit the site of displacement today. This interdisciplinary work makes a valuable contribution to sensory studies, memory studies, migration studies, and Asian studies.

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is

little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The

culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal. *The Weekly Notes* Fantagraphics Books Common Core Connections: Language Arts is the perfect tool for helping kindergarten
