 Key topics: keeping time, calendar, sundials, hourglasses, clocks, navigation, sound, frequency, pitch, sound recording, Doppler shift, earthquake waves, radio, amplifying signals, semiconductors, transistors, parallel circuits) IPC consists of twelve chapters of text and twelve companion student activity books. This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the

people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)

Medicinal chemistry is a complex topic. Written in an easy to follow and conversational style, Basic Concepts in Medicinal Chemistry focuses on the fundamental concepts that govern the discipline of medicinal chemistry as well as how and why these concepts are essential to therapeutic decisions. The book emphasizes functional group analysis and the basics of drug structure evaluation. In a systematic fashion, learn how to identify and evaluate the functional groups that comprise the structure of a drug molecule and their influences on solubility, absorption, acid/base character, binding interactions, and stereochemical orientation. Relevant Phase I and Phase II metabolic transformations are also discussed for each functional group. Key features include: • Discussions on the roles and characteristics of organic functional groups, including the identification of acidic and basic functional groups. • How to solve problems involving pH, pKa, and ionization; salts and solubility; drug binding interactions; stereochemistry; and drug metabolism. • Numerous examples and expanded discussions for complex concepts. • Therapeutic examples that link the importance of medicinal chemistry to pharmacy and healthcare practice. • An overview of structure activity relationships (SARs) and concepts that govern drug design. • Review questions and practice problems at the end of each chapter that allow readers to test their understanding, with the answers provided in an appendix. Whether you are just starting your education toward a career in a healthcare field or need to brush up on your organic chemistry concepts,
